

### Brake Upgrades

The premium brake system has been developed to and tested to the demanding Auto motor sport standard originating from Europe. This is an ultimate abuse test for brake systems. Under these demanding conditions, there is no disputing the massive gains over standard brakes with reduced stopping distance of up to 20 metres being recorded for some applications.

### Sure Shifts

A Herrod designed Billet Alloy Unit that reduces shift throw by 40% resulting in quicker, more positive gear selection.

Replacement gear shift for AU - BF manual vehicles.

### Suspension Upgrades

#### Lowered Suspension Packages

Lowered Suspension Packages BMP can supply a range of performance suspension systems for the BA Falcon series, ranging from the basic ride height packages, to full performance systems suitable for motor sport applications. During development, consideration was given to the following variables;

- Vehicles Steering and Suspension Geometry
- Maximum Vehicle loadings
- Wheel and Tyre sizes
- Vehicles Balance
- Ride Quality
- Ride Height

To ensure the above we use only the best quality parts sourced from reputable suppliers to the motor sport industry.

### Bonnet Shakers

Our shaker kit introduces unrestricted cold air to the engine intake system through a 102mm shaker hose, while still using the original air filter pod and bonnet. Not only does it increase performance at high speed by a 'ram air' effect, delivering high pressure air to the engine, but it is a significant enhancement to the aesthetics of your vehicle.

### Pod Gauges

These dashboard mounted measuring devices are professionally installed by our staff following a great custom factory finish. Inclusively, these two gauge pods allow the driver easy viewing of the measurements requested.

### Scuff Plate Inserts

Protect the paint and give the vehicle that finishing touch with Alloy Scuff Plates. Self-adhesive for easy application or supplied and fitted for the perfect finish. To suit all BA & BF—XR, XT & GT.

### Rocker Covers

Protect the rocker arms using the cover of your choice.

## PERFORMANCE EQUIPMENT

For all vehicle accessories and enhancements look no further than Black Mac Performance – the professionals in performance.

Unit 1/38 Russell Street,  
Morley W.A. 6062

www.blackmac.com.au

Plenum Cover Plate

Suit BA & BF XR8/GT.

BA/BF Turbo Twin Cat Engine Pipe

New engine pipe for BA & BF Turbo/BA & BF... gives increase in flow and power.

BA Turbo Bonnet Decal

Looking good with this bonnet enhancement. Available in any colour or create your own decal to suit BA, BF, XR8 & GT.

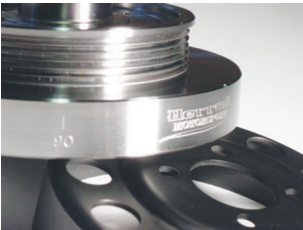

Stealth Tuner

AU, BA, BF, & F-250 owners; unlock the true power of your vehicle. Using the Stealth Computer Module, this can be done at the touch of a button. Each Stealth unit comes with three performance programme options to suit your standard or performance enhanced vehicle. Following a very simple loading procedure, your preferred performance programme will be selected and within a matter of minutes your factory programme is stored safely within the Stealth unit, replaced by your chosen performance programme. The Stealth unit is VIN protected to your vehicle however, you can alternate between your factory settings or performance programmes.

Under-Drive Pulley

Feeling the benefits of the Under-Drive Pulley system is all in the throttle response - with 25% reduced drag on your accessories resulting in far superior acceleration.

Camshafts Boss V8

Assorted Boss Engine Camshafts available.

Power Snorkel

BA - XR8 / GT / GT-P

Replace your ugly, restrictive 90mm factory corrugated induction tube with the SMOOTH, Hi-FLOW 100mm POWER SNORKEL for maximum uninterrupted airflow, delivering an extra 5rkwK's, improved throttle response, heightened induction roar and enhanced under bonnet appearance.

Bumper Intake Mesh

All grilles come ready to install and powder coated in black.

BF XR8 - available in Plain or Herrod

BA XR8 - available in Plain or Herrod

Alloy Rims

STARCORP

Give your car that 'flashy' finishing touch. A car is not complete without a set of quality rims. Bring your vehicle in for the best advice in car aesthetics. We'll partner your tyres with the best alloy rims to suit your car.

Cold Air Induction Systems

Currently your car is either breathing in warm air from within the engine bay or trying to suck enough air from a standard undersized and restrictive induction. Cool air that is forced into a car's engine is a well-proven way of improving your car's performance. Cool air is mandatory for optimum performance, as it contains more oxygen than warm air and is therefore denser, resulting in a more effective burning of the fuel mix. Cold Air Induction systems are designed to channel high-pressure cool air from the front of a moving car directly to the air box. This ramming effect of cool air provides superior performance to that of a pod or panel system that filters swirling hot air from within the engine bay with no ramming effect whatsoever. Your vehicles ECU and / or airflow meter are designed to detect this increase of cool air and alter the air/fuel mixture accordingly. High- pressure airflow is forced into the engine like a slight supercharging effect.

Increased efficiency from a Cold Air Induction system produces:

More Power

Better Torque

Improved Fuel Economy

Better Acceleration

Smoother Performance

High Flow Air Filters

In conjunction with our Cold Air Induction Systems, Black Mac Performance recommends upgrading your current air filter to maximise air intake efficiency. In-house testing on our Dyno-Dynamics chassis dynamometer shows that replacing your current air filter with a BMC Hi-Flow Unit, results in increased power and better fuel economy, whilst maximising dirt and debris removal - all in a re-usable design.

BF/BA 6 Cyl All

BF/BA V8 220 kW

Headers

BMP Headers extract spent gasses quickly and efficiently delivering superior performance.

Our Headers are designed specifically to fit within the tight confines of the engine-bay without sacrificing primary and secondary tube lengths, required to make increased power. Special attention was given to protecting steering-shaft and steering-rack boots with replacement heat shields.

Our Headers are manufactured to our strict tolerances and ceramic coated to improve efficiency, longevity and visual appeal. All our headers come complete with Hi-Flow Catalytic Converters, heat-shields and necessary gaskets and fitting hardware. All Headers and Hi-Flow Cats meet Australian Design Rules.

BA 6 Cylinder & Territory

BA V8 220 kW

BA XR8 GT & GTP

BF XR8 GT & GTP

Exhaust Systems

Mild Steel/Stainless Steel

Full Systems Inc Headers and High Flow Catalytic Converters

Our Exhaust Packages are developed in house Dyno Dynamics Chassis dyno to Increase your car's power (On Average 15-20kW at the rear wheels), deliver a sportier note, and improve fuel economy, without compromising ground clearance and fitment. Herrods Full flow design uses large diameter sports mufflers and ultra-smooth mandrel bends on all pipes, and are direct factory replacements meaning no cutting, welding or chassis modifications as required by other systems. Combined, these features ensure maximum flow, torque, power and fuel economy, delivering the best all round solution to your performance exhaust needs.

Packages include ceramic coated Headers, Hi Flow Catalytic Converters and Mild Steel system

Helix Spacers

Extensive in house testing has demonstrated that the standard throttle-body flows sufficient air out of the box. However, by adding the Helix Spacer between the throttle-body and manifold, increases air induction turbulence and air speed into the manifold, resulting in sharper throttle response and increased power.
